

In-Session Activity - Industry Problem Research & GenAI Opportunity Assessment

Objective

The objective of this activity is to research an industry or organization and identify key problem areas where Generative AI can create measurable business value. You will analyze industry challenges, assess existing systems, and propose feasible GenAI-based solutions.

The aim is to develop your analytical, research, and problem-solving skills in the context of real-world business environments.

Overview

Note: This is an In-Session Activity. No Submission Required.

In this activity, you will:

- Select a specific industry or organization type
 - Analyze current business challenges and operations
 - Study existing technology and workflows
 - Identify and evaluate GenAI use cases
 - Recommend high-impact GenAI opportunities
-

Specifications

1. Choose an Organization Type (Select One)

Select **one** of the following:

- Healthcare System
- E-commerce Company
- Financial Services Firm
- Manufacturing Company

- Education Institution
 - Government Agency
 - Media / Entertainment Company
-

2. Research & Analysis

Conduct in-depth research on the selected organization/industry.

You must include:

a) Current Pain Points (Minimum 2)

Identify and explain at least **two major challenges**, such as:

- Operational inefficiencies
- High costs
- Manual processes
- Customer dissatisfaction
- Compliance issues
- Data management problems

Each pain point should be supported with examples.

b) Decision Makers & Stakeholders

Identify key stakeholders involved in the process, such as:

- Business leaders
- Department heads
- Operational staff
- IT teams
- End users

Explain their roles and interests.

c) Current Technology Stack

Analyze existing systems and tools, including:

- Software platforms (ERP, CRM, LMS, etc.)
- Databases
- Analytics tools
- Manual processes
- Reporting systems

Mention limitations where applicable.

d) Comparable GenAI Implementations

Research similar GenAI solutions in the industry:

- Chatbots
- Automated analytics
- Recommendation systems
- Virtual assistants
- Document processing systems

Provide real examples where possible.

3. GenAI Opportunity Assessment

Based on your research, identify and evaluate potential GenAI applications.

a) Identify at Least 2 Use Cases

Propose **two** possible GenAI use cases relevant to the organization.

Examples:

- AI-powered customer support
 - Automated report generation
 - Fraud detection assistant
 - Learning content generator
 - Smart quality inspection
-

b) For Each Use Case, Specify:

1. Problem Statement

Clearly describe the business problem being addressed.

2. Proposed GenAI Solution

Explain how GenAI will solve the problem.

3. Expected Benefits

Quantify benefits where possible, such as:

- Time reduction (e.g., 40% faster processing)
- Cost savings
- Accuracy improvement
- Productivity increase

4. Required Capabilities

Mention technical and organizational requirements:

- Data availability
- AI models
- Infrastructure
- Integration systems
- Skilled workforce

c) Ranking by Impact & Feasibility

Create a scoring matrix to rank the three use cases based on:

Criteria	Description
Impact	Business value and benefits
Feasibility	Technical and operational ease

Provide final ranking.

Deliverables (Optional, No Submission Required)

Research Document

Prepare a research document, 3-5 pages, including:

1. Executive Summary
 2. Industry Analysis
 3. Current State Assessment
 4. Three Use Case Opportunities (with scoring)
-

Example Research Document Structure

1. Executive Summary (0.5 page)
 2. Industry Overview (1 page)
 - Market size & trends
 - Key challenges
 - Current solutions
 3. Organization Analysis (1 page)
 - Business model
 - Pain points
 - Stakeholders
 4. GenAI Opportunity Assessment (2 pages)
 - Use Case 1 (with scoring)
 - Use Case 2 (with scoring)
 - Use Case 3 (with scoring)
-
